

Hot water bath application

A hot tub is a device that provides hot water for soaking. Common uses include:

1. Relaxation and Soothing:

Hot tubs are widely used to relax and soothe the mind and body. The warmth of hot water and the comfort of soaking can help relax tense muscles and reduce fatigue and stress. It also helps improve blood circulation and promotes a sense of well-being in the body.

2. Rehabilitation and therapy:

Hot tubs can be used for rehabilitation and therapy purposes. Warm water can help soothe sore joints and muscles and facilitate the healing process. It is widely used in physical therapy, rehabilitation centers and recovery from sports injuries.

3.Socializing and Recreation:

Hot tubs are also considered a social and recreational facility. At home or in public places, people can enjoy the warmth of a hot tub with family, friends or partners, chatting, relaxing and enjoying time.

4. Beauty and skin care:

Some people believe that hot tubs are good for beauty and skin care. The heat of hot water can help open pores, promote deep cleansing and blood circulation of the skin, making the skin softer and more radiant.

It is important to note that caution and safety guidelines should be followed when using hot tubs. Make sure the water temperature is right and avoid over-immersion and overheating to avoid adverse effects on the body. If necessary, it is recommended to consult a professional to ensure safe and reasonable use.

Model: HT-101

A soaking wood-fired hot tub combines a wood fire with a hot tub, and just reading the name makes you want to get cozy and enjoy this combo. This bathtub is designed so that if you want to enjoy a nice hot bath outdoors while being in touch with nature, you can heat the water with wood.
